

BAN410/510 Challenge Lab 6

Using the ZNAUS24_CUSTOMER and ZNAUS24_ORDERS tables, create a program that asks a user to enter a product ID and returns information for customer who have ordered the corresponding product. Your input screen should look like this:

Please Enter Product ID:

When the user runs the program, it should display the names and email addresses of the customers who have ordered the product, and the quantity the customers ordered. Here is an example of output if the user enters 211088:

Customer Name		Customer Email	Quantity
WALDO	WILLIAMS	WWILLIAMS@HOTMAIL.COM	2
JACK	WHITE	JACKW@HOTMAIL.COM	1
WALTER	JOHNSON	WALTERJ78@GMAIL.COM	4

If the user enters a product ID not listed in the ZNAUS24_ORDERS database table, the following message, and only the message should be displayed on the screen:

No Records Found
