

# BAN410/510 Individual Lab 7

During this lab, you will create a sales revenue report for product sales. Using the ZNAUS24\_PRODUCTS, ZNAUS24\_CUSTOMER and ZNAUS24\_ORDERS tables, create a program, that when run, asks the user to enter a product category. When the user enters a product category corresponding to a product or products listed in the ZNAUS24\_ORDERS table, the program should generate a report which lists the product names, customer names, price of the products ordered, and quantity of products ordered. The program will also provide a total revenue for all products shown in the report (revenue = price \* quantity ordered). The program input screen should look like this:

Enter Product Category:

The output of the program should look like this (BEDS was entered for the product category):

Product Name	Customer Name		Price	Quantity
LYCKSELE	MARCUS	WHITE	495,00	1
MYDAL	KELLY	JOHNSON	795,00	2
Total Revenue: \$		2.085,00		

If the user enters a product category which returns no records, the following message (and only the message) should be displayed:

No Records Found

When complete, make sure your program is activated in the SAP system, and submit a text version of your code in Canvas.
