

BAN410/510 Challenge Lab 9

Below you will find the code for a simple program. Copy and paste the program code into a new ABAP program and complete the following modification:

- 1) Initialize the parameter so that it automatically displays the word CHAIRS on the input screen when the program runs.
- 2) Divide the output into pages showing a maximum of 5 rows of data on the report screen.
- 3) Display the table header at the top of each page on the report screen.

```
PARAMETERS cat TYPE znaus24_products-product_category.
```

```
TYPES: BEGIN OF product_search,  
       product_name  LIKE znaus24_products-product_name,  
       product_category LIKE znaus24_products-product_category,  
       price         LIKE znaus24_products-price,  
END OF product_search.
```

```
DATA: itab_products TYPE STANDARD TABLE OF product_search,  
      wa_products   TYPE product_search.
```

```
SELECT product_name product_category price  
FROM znaus24_products INTO TABLE itab_products  
where product_category = cat.
```

```
format color 4.  
write 'Product Name      Product Category          Price'.  
format color off.
```

```
loop at itab_products into wa_products.  
write: / wa_products-product_name, wa_products-product_category, wa_products-price.  
endloop.
```
